

# NON-SUSTAINABLE PALM OIL AFFECTS EVERYONE

**Palm oil produced in a NON-sustainable way has a negative impact on the planet.**

- **Millions of acres of rainforest are burned or clear-cut every year. This releases huge amounts of carbon and pollutes the atmosphere.**
- **Many species lose their homes when rainforest is destroyed, including orangutans, elephants, tigers and hundreds of other species.**
- **Local people lose their land and livelihoods to non-sustainable palm oil production.**
